

Delivering a Backhoe in Kuwait

Another example of doing it
right now instead of doing it
right

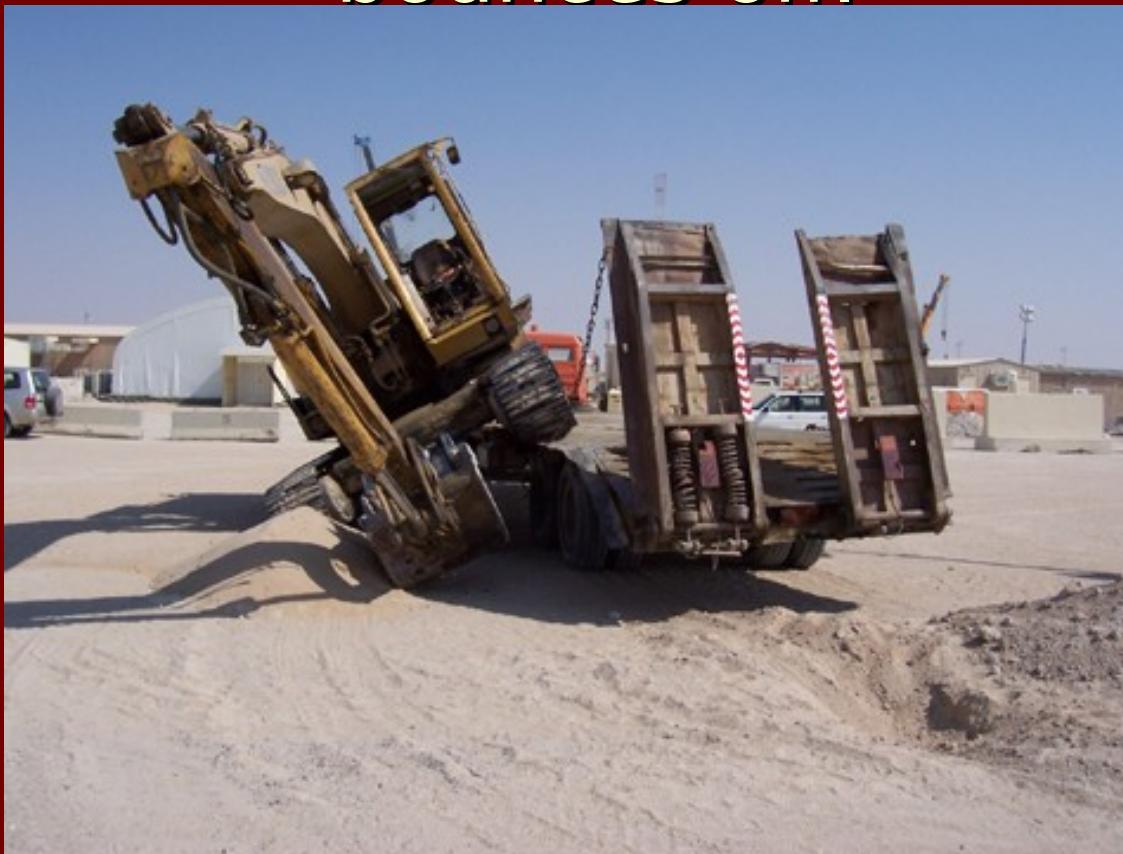

ORM: Occasional Risk Mismanagement

The Corps of Engineers contracts with local nationals to bring in a big back hoe

ORM: Occasional Risk Mismanagement

The plan: drive off the flat bed onto a pile of sand. The left wheels go into a hole. The rig isn't tied down and it bounces off.

ORM: Occasional Risk Mismanagement

The driver feels uneasy and uses his bucket to stabilize the situation.

ORM: Occasional Risk Mismanagement

The equipment springs a leak, loses hydraulic and radiator fluid, and refuses to start.

ORM: Occasional Risk Mismanagement

This breakdown forces cooler heads to prevail. Additional assets are brought to bear. The equipment is lifted up safely and the truck drives off from underneath. No one is injured and the damages are reduced. A little risk management anywhere along the line could have prevented this from happening. The operator initially refused outside advice about the risks of what he was planning.
